

Writing Advice*: Continuity

Walking your reader through your ideas requires continuity of your thoughts.

This is a quick check list that you can use, to strengthen continuity of thoughts so that your writing is cohesive and does the work you want it to do:

- ✓ Add context to provide sufficient background. To do this, you may have to define new technical terms, or concepts.
- Explain the significance of the data reported: why does the data matter?
 What does it demonstrate?
- Quantify how much or how many, using the appropriate unit of measure, when using comparatives, or adjectives: hot, cold, high, low, increase, decrease, etc.
- ✓ Specify the agent of actions, if the agent isn't evident from the context.
- ✓ Trim excessive nominalizations (development, maintenance) where possible.
- Eliminate superfluous phrases and sentences: remove excessive or obvious statements.
- Clear up any ambiguous statements: is the statement unnecessarily complex, or could it be misinterpreted?
- Check for logical connections within and between sentences: do your ideas flow smoothly from idea to the next?
